

# 2-way flow control valve

## Type 2FRM

**RE 28163**

Edition: 2015-07

Replaces: 02.09

- ▶ Size 6
- ▶ Component series 3X
- ▶ Maximum operating pressure 315 bar
- ▶ Maximum flow 32 l/min

### Features

- ▶ Porting pattern according to DIN 24340 form A
- ▶ External closing of the pressure compensator, optional
- ▶ As threaded connection for control panel installation with connection thread G3/8
- ▶ Check valve, optional
- ▶ 2 adjustment types, optionally:
  - Rotary knob with scale
  - Lockable rotary knob with scale

**Function, section:** Type 2FRM 6 B...

#### General

The flow control valve type 2FRM is a 2-way flow control valve. It is used for maintaining a constant flow, independent of pressure and temperature.

The valve basically comprises a housing (1), a rotary knob (2), orifice bush (3), pressure compensator (4) and an optional check valve.

#### Version "B" ... "M"

(**without** external closing, **without** check valve)

The flow from channel A to B is throttled at the throttling point (5). The throttle cross-section is set by turning the rotary knob (2).

In order to keep the flow in channel B constant, independent of the pressure, a pressure compensator (4) is fitted downstream of the throttling point (5).

The compression spring (6) presses the pressure compensator (4) downwards against its stop and keeps the pressure compensator (4) in the open position when there is no flow through the valve. When fluid flows through the valve, the pressure acting in channel A applies a force to the pressure compensator (4) via nozzle (7).

The pressure compensator (4) moves into the controlled position until the forces balance. If the pressure in channel A rises, the pressure compensator (4) moves in the closing direction until a balance of forces is once again attained. Due to this continuous compensation of the pressure compensator (4), a constant flow is obtained.

In order to control a flow through the valve in both directions, a rectifier sandwich plate type Z4S 6 may be fitted below this flow control valve.

**Type 2FRM 6 B76-3X/.M...**

## Function, section, circuit example: Type 2FRM 6 A...

### General

The flow control valve type 2FRM is a 2-way flow control valve.

It is used for maintaining a constant flow, independent of pressure and temperature.

The valve basically comprises a housing (1), a rotary knob (2), orifice bush (3), pressure compensator (4) and an optional check valve (8).

### Version "A" ... "R"

(with external closing, with check valve)

In principle, the function of this valve corresponds to the function of version "B" ... "M".

However, the flow control valve is provided with the possibility of an external closing of the pressure compensator (4) via channel P (9). The external pressure acting in channel P (9) via nozzle (10), holds the pressure compensator (4) in closed position against the compression spring (6). When the connected directional valve (11) is switched over to permit flow from P to B, control is achieved as with type "B". Thus, a start-up jump is avoided. This version can only be used for the supply control. The free return flow from channel B to A is via the check valve (8).

### Notice:

The pressure loss of port P upstream of the directional valve to port A upstream of the flow control valve makes itself felt by a reduced flow.

Type 2FRM 6 A76-3X/..RV

**Function, section: Type 2FRM 6 SB...****General**

The flow control valve type 2FRM is a 2-way flow control valve.

It is used for maintaining a constant flow, independent of pressure and temperature.

The valve basically comprises a housing (1), a rotary knob (2), orifice bush (3), pressure compensator (4) and an optional check valve (8).

**Version "SB" ... "RV"**

(**without** external closing, **with** check valve, with threaded connection **for control panel installation**)

The flow from channel A to B is throttled at the throttling point (5). The throttle cross-section is set by turning the rotary knob (2).

In order to keep the flow in channel B constant, independent of the pressure, a pressure compensator (4) is fitted downstream of the throttling point (5).

The compression spring (6) presses the pressure compensator (4) downwards against its stop and keeps the pressure compensator (4) in the open position when there is no flow through the valve. When fluid flows through the valve, the pressure acting in channel A applies a force to the pressure compensator (4) via nozzle (7).

The pressure compensator (4) moves into the controlled position until the forces balance. If the pressure in channel A rises, the pressure compensator (4) moves in the closing direction until a balance of forces is once again attained.

Due to this continuous compensation of the pressure compensator (4), a constant flow is obtained.

The free return flow from channel B to channel A is via the check valve (8).

**Important information on hydraulic fluids:**

- For more information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!
- The flash point of the hydraulic fluid used must be 50 K higher than the maximum solenoid surface temperature.

**► Flame-resistant - containing water:**

- Maximum operating pressure of 210 bar
- Maximum hydraulic fluid temperature 60 °C
- Life cycle compared to operation with mineral oil HL, HLP 30 to 100 %

**Technical data:** Rectifier sandwich plate

(For applications of the component outside the specified values, please contact us!)

**Characteristic curves**

(measured with HLP46,  $\vartheta_{oil} = 40 \pm 5 \text{ } ^\circ\text{C}$ )

**Flow dependency on the scale setting (flow control A → B)**

### Characteristic curves

(measured with HLP46,  $\vartheta_{oil} = 40 \pm 5 \text{ }^\circ\text{C}$ )

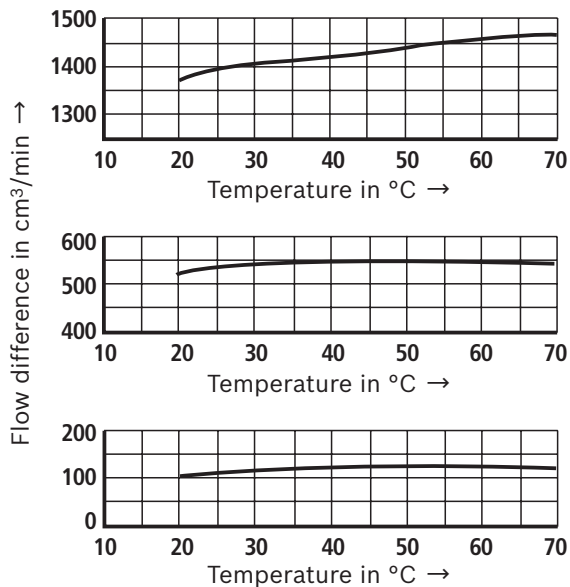

**$\Delta p$ - $q_V$  characteristic curve** via check valve B  $\rightarrow$  A;  
orifice closed

**$p_E$ - $q_V$  characteristic curve**

**Temperature dependency** at  $\Delta p = 20 \text{ bar}$

**Rectifier sandwich plate**  
 **$\Delta p$ - $q_V$  characteristic curve**

**Dimensions:** Subplate mounting – version "A" and "B"  
(dimensions in mm)

Item explanations, subplates, and valve mounting screws see page 12.

**Dimensions:** Threaded connection for control panel installation – version "SB"  
(dimensions in mm)

Item explanations and valve mounting screws see page 12.

**Dimensions:** Adapter plate HSE 05 G06A001-3X/V00  
(dimensions in mm)

**Notice:**

The adapter plate (material no. **R900496121**) is required for mounting a flow control valve type 2FRM 6 B..-3X/.. to an existing flow control valve type 2FRM 5 -3X/...

**Dimensions**

- 1 Adjustment type "3" (lockable rotary knob with scale)
  - 2 Adjustment type "7" (rotary knob with scale)
  - 3 Identical seal rings for ports A, B, P, and T
  - 4 Space required to remove the key
  - 5 Ø3 bore in version "B" not bored (without external closing)
  - 6 Name plate
  - 7 Position of the marking at port P
  - 8 Porting pattern according to DIN 24340 form A
  - 9 Connection thread G3/8 according to ISO 228-1
  - 10 Position of the marking vis-à-vis name plate
  - 11 Connection surface for flow control valve type 2FRM 6
  - 12 Connection surface for flow control valve type 2FRM 5
  - 13 Seal ring
  - 14 Mounting bolts for adapter plate (included in the scope of delivery)
- 4 hexagon socket head cap screws**  
**ISO 4762 - M5 x 30 - 10.9-fIZn-240h-L**  
(friction coefficient  $\mu_{total} = 0.09 \dots 0.14$ );  
tightening torque  $M_A = 7 \text{ Nm} \pm 10 \%$

**Control panel installation (version "SB"):**

**Valve mounting screws** (separate order)  
**4 hexagon socket head cap screws**  
**ISO 4762 - M5 - 8.8-fIZn-240h-L**  
(friction coefficient  $\mu_{total} = 0.09 \dots 0.14$ );  
tightening torque  $M_A = 7 \text{ Nm} \pm 10 \%$ ,  
(minimum useable thread depth = 6.5 mm)

**Subplate mounting (version "A" and "B"):**

**Subplates** according to data sheet 45052 (separate order)  
Type G 341/01 (G1/4)  
Type G 342/01 (G3/8)  
Type G 502/01 (G1/2)

**Valve mounting screws** (separate order)  
▶ Without rectifier sandwich plate  
**4 hexagon socket head cap screws**  
**ISO 4762 - M5 x 30 - 10.9-fIZn-240h-L**  
(friction coefficient  $\mu_{total} = 0.09 \dots 0.14$ );  
tightening torque  $M_A = 7 \text{ Nm} \pm 10 \%$ ,  
material no. **R913000316**

▶ With rectifier sandwich plate  
**4 hexagon socket head cap screws**  
**ISO 4762 - M5 x 70 - 10.9-fIZn-240h-L**  
(friction coefficient  $\mu_{total} = 0.09 \dots 0.14$ );  
tightening torque  $M_A = 7 \text{ Nm} \pm 10 \%$ ,  
material no. **R913000325**

**Dimensions:** Rectifier sandwich plate type Z4S 6-1X/V  
(dimensions in mm)

**Notice:**

The rectifier sandwich plate Type Z4S 6-1X/V can **only** be used in connection with the flow control valve Type 2FRM 6 B.-3X/.. (without closing of the pressure compensator)!

Required surface quality of the valve contact surface

- 15 2-way flow control valve
- 16 Rectifier sandwich plate
- 17 Subplate according to data sheet 45052 and valve mounting screws see page 12.
- 18 Seal ring
